

Entrada Links Hospitals with Their Physicians for Timely Chart Completion, Easy Document Sharing and Faster Billing

Entrada's technology for hospitals improves clinical documentation, data sharing and integration, and revenue cycle management. It securely automates documentation and data exchange between hospitals and practicing physicians to improve the accuracy of clinical records, *dramatically* accelerating chart completion and billing while allowing for automated document sharing between the facility and its physicians' clinics.

Streamline your processes and improve revenue management

With Entrada's **ExpressShare™** technology, your hospital can greatly reduce chart completion time and ensure better chart accessibility and retrieval. Entrada manages unsigned documents in our **MyEntrada™** portal, while electronically flagging a physician to review it. The physician can remotely view, edit, and sign the document from the convenience of any web browser utilizing our **ExpressSign™** eSignature technology. We automatically route the completed note to both the hospital and clinic for return into the patient's record, allowing all entities to quickly bill for their services and improving their revenue cycle management.

ExpressShare™ results in improved communication with physicians, better patient information management, and easier in-house chart reviews by coders and case managers.

Improve relationships with referring physicians

Entrada's clinical documentation solution allows attending physicians, hospitalists, intensivists and other staff to easily provide referring physicians with timely clinical updates, resulting in better care coordination and increased referral volume.

Increase physician satisfaction

Entrada allows your medical staff to document clinical information and communicate with your hospital system. Unlike handwriting, typing or independent dictation systems, our platform allows you to efficiently capture clinical documentation electronically and chronologically.

"Doctors spend 75 percent less time proofreading and staff spends less time making corrections. Turnaround time is phenomenal. I have one doctor who dictates as he goes. His morning dictations are usually back after lunch."

Sherry Rich,
Middle Tennessee Center for Lung Disease

Seamless integration

Entrada's solution compliments your existing processes. Our technology interfaces directly with your hospital information system, enhancing continuity of care for patients. Our document sharing technology can also support your ACO and data integration strategy, giving simultaneous access of clinical documentation to multiple facilities.

IT departments will appreciate it

Entrada operates as a Software-as-a-Service model, with no heavy IT implementations, infrastructure, or resource requirements involved. It connects to your existing systems without altering any of your current processes. Entrada is simple, affordable and easy to install.

ExpressShare™ Multi-Routing for Acute Care

Entrada streamlines the clinical documentation process, taking dictated notes and turning them into electronic files that you can easily access or incorporate into your EHR or distribute to other facilities.

Key Features

- **Mobility** – Physicians can use the mobile platform of their choice to dictate, review, and approve documentation from anywhere.
- **Capability** – Seamlessly integrates with inpatient and ambulatory scheduling and clinical systems.
- **Efficiency** – Faster document turnaround for reduced billing delays.
- **Simplicity** – Easy connection with external providers and locations.
- **Productivity** – Increased productivity and clinician control with reduced costs and turnaround times.
- **Affordability** – No major IT infrastructure or investment is required, providing an immediate return on an affordable investment.
