

Entrada Operates on Revenue Cycle for Ambulatory Surgery Centers

For ambulatory surgery centers, rapid chart completion and document sharing with attending surgeons is critical to revenue cycle management. Entrada's clinical documentation and document sharing platform simplifies remote sign-off and distribution of patient records for faster reimbursement. Whether you've yet to deploy an EHR, in the middle of a difficult rollout, or watching an EHR drain your productivity, Entrada's **Expressway to Physician Productivity™** can save you time, grief, and money.

Operate. Dictate. Done.

Entrada works securely wherever your doctors do: in the surgery center, clinic, hospital, home, airport--anywhere. They can use Entrada's platform on an iPhone®, iPad® or Windows Mobile device to quickly document surgical cases for more timely and complete patient records.

With Entrada's **ExpressShare™** technology, we finalize and route dictated reports to wherever they need to go, whether that's the surgery center, doctor's home clinic, a referring physician, or other location. Utilizing our **ExpressSign™** eSignature capability, the doctor can then review and sign the completed document securely from within the **MyEntrada™** portal from any web-enabled device. Once completed, we route copies to the physician's billing and medical records department as well as back to the facility for insertion into the relevant clinical record to support its charting and billing. (This entire process is completed automatically with no staff involvement from the clinic or ASC).

Greater accuracy and a greater return on investment

Our Software-as-a-Service model means you don't have a large, up-front capital investment, which enables you to start saving immediately from faster chart completion and reductions in dictation errors by up to 95 percent. Our **ExpressShare™** technology also helps you and your attending surgeons cut your chart completion time significantly. Plus, you won't need to switch from your current surgical scheduling system, EHR system or charting process if you are not yet on an EHR. We are vendor agnostic, and work well with the industry's leading systems.

"The ability to communicate quickly back to Primary Care Physicians is a big advantage to me as a surgeon."

William Edwards, MD.,
The Surgical Clinic

Simple technology, improved at every step

Entrada was designed to help surgeons and ASCs, regardless of where they are in their evolution to digital records, from inefficient transcription and document management platforms to EHR systems at various levels of acceptance and use. >>

Entrada fully interfaces into your facility's scheduling system, generating a surgical work list from which physicians dictate. With Entrada, physicians do not have to identify themselves or the patient when dictating op notes, which significantly reduces time and processing errors. Also, our ExpressCapture™ and ExpressNote™ features quickly automate your chart review and completion.

ExpressShare™ Multi-Routing for Surgery Centers

Entrada streamlines the clinical documentation process, taking dictated notes and turning them into electronic files that you can easily access or incorporate into your EHR or distribute to other facilities.

Key Features

- **Efficiency** – Faster document turnaround for reduced billing delays.
- **Affordability** – No major IT infrastructure or investment is required, providing an immediate return on an affordable investment.
- **Mobility** – Surgeons can use the mobile platform of their choice to dictate from anywhere.
- **Capability** – Seamless integration with your scheduling and clinical systems.
- **Simplicity** – Easy connection with external providers and locations.
- **Productivity** – Increased productivity and clinician control with reduced costs and turnaround times.

YOUR GATEWAY TO THE ELECTRONIC HEALTH RECORD
